Release Notes: 07/01/2016

Last Modified on 07/07/2016 4:18 pm CDT

What's New Version ∞2016.7.1:

- Created the ability to add OT Factor rates to be hierarchy specific.

- Changing the rate on an assignment will now copy the shift from the old assignment to the new assignment.

- Added a new config so the default washed status for resume parsed employees can be set independently of manually created employees. (DefaultResumeParserWashedStatus)

- Changed the Worker Comp Code drop down to an auto combo box. Meaning you can now type in a worker comp code and Enterprise will fill out the closest matching worker comp code that you typed.

- Added a config to disable the "Pay Frequency automatically adjusted" warning when calculating checks in a payroll run. (DisablePayFrequencyWarning)

Enterprise:

- Fixed an issue where Daily Maintenance would sometimes fail to flag an employee as Electronic Pay on the day their prenote was approved

- Added the "DISTINCT" clause the two insert statements that determine the week id within fx_report_SalesAnalysisYearly. Issues were coming up when customers with multiple entities run the report from system level and duplicate line items would be returned within the result set.

- Changed the interview tally to calculated based on employee.interviewdate instead of employee.datecreated. This is to give more accurate numbers in the Rep Productivity Report.

- Fixed a duplicate juris creation that could happen on PA Local State taxes on employees.

- Fixed an issue that could cause assignments to duplicate themselves hundreds of times when moving orders. This would only occur in an event where an employee had a matching SSN with another employee on the same order that was moved.

- Added error to catch when the amount we are matching on the GL side does not match the amount on the bank side.

- Fixed adjustment calculations and respecting past sequences' changes to the available net.

- Added some extra code to limit branch override mappings to only create for items that were used in the specific branches, instead of blindly setting up a branch override mapping for any item that

already has a mapping created for it.

- An error will now display if a user attempts to post an abandoned Invoice Pay session.
- Previously deleted FyreSync accounts wouldn't disappear immediately after a user deleted them. Now they do.

Taxes:

- Elyria OH and Elyria Twp-City of Elyria JEDD increased tax rate from 1.75% to 2.25% effective 7/1/16
