

System Requirements to Run Enterprise

Last Modified on 05/10/2022 11:42 am CDT

Below are the minimum hardware and software requirements to run Enterprise Infinity. If you are utilizing apps.ontempworks.com to log in, check out [Apps.OnTempWorks.com Requirements and Troubleshooting](#) for additional requirements and troubleshooting steps.

Hardware Requirements

Standards	Requirements
Processor	1.7GHz or better
RAM	4 GB Note: When running under a virtual environment, allow at least 500 MB per user on the host
Video	1024 x 800 screen resolution Support for DirectX9, min. dedicated 128 MB Video RAM
Disk Space (Minimum)	1GB

Software Requirements

Standards	Requirements
Operating System (32-bit and 64-bit)	Windows 10 Windows Server 2008, 2012, 2012 r2, 2016
.NET Frameworks Versions	4.7.2 and 3.5.1

To download the latest versions of .Net see <https://dotnet.microsoft.com/download/dotnet-framework/net472>.

Note Windows 11 is not currently supported for running Enterprise due to limitations presented by the operating system including:

- A restricted RDP program, lacking features required by Enterprise.
- The inability to properly setup printers.
- The inability to properly map network drives.

Due to issues outside of TempWorks' control, it is not recommended to utilize Enterprise on a Windows 11 machine.

Additional Recommendations

- The recommended internet speed for optimal performance is 1-2Mbps per user up and down.
- 750kbps per user is the recommendation to be able to efficiently run Enterprise via RDP (remotely).
- If you use VoIP for your phones (ex. Vonage), you may need additional bandwidth on top of the above.

Note Chrome OS is not currently supported for running Enterprise. Consider using [Beyond](#), our web based platform.
