# Release Notes: 06/09/2017

**Version ∞2017.6.9:**

---

## Enterprise

---

**Improvements:**

- We now log changes to the Check Delivery field under the payment options on employee records. This can be found on the Employee Change log report.
- Updated E-Verify to the newest version.
- Created a New Hire Format for Massachusetts.

**Fixes:**

- Made two corrections when adding invoice recipients in Customer > Invoice Setup > Billing Setup. Newly added contact methods entered in the dialog via the "+" button are now populated in the contact method drop down. Also, added an SMSEmail type to be fetched for the same drop down.
- Fixed Enterprise validation for stub memos when saving changes to a staged check.
- Fixed an error stating "Sequence contains no elements" when trying to access the Service Rep page in the Administrative area of Enterprise.
- Made two modifications to the customer information area in contact records > Details:
  - Now, when clearing the "Customer" field, all other customer information fields will be cleared.
  - Users can no longer attempt to select a worksite address without first having selected a customer.
- The Message Productivity report has been updated to prevent inaccurate and duplicate results.
- The Hours Forecast report would previously throw an error if there were problems with any

assignment start/end times in the system. This has been changed and now the report will only error on assignments that match the search criteria.

- Fixed an error that could come up when expanding the details of an employee on the HrCenter dashboard.
- The Abandon Pos Pay window could previously show the incorrect service reps name that created a pos pay file. This has been corrected.

**Maintenance:**

- Modified the CA New Hire procedure to make it easier to read as well as removing unused variables, omitting hyphens from the employer's Federal EmployerID/State ID and Zip Code.
- Behind the scenes database cleanup of bad references and invalid SQL.
- Upgraded the Patagames PDF package to the latest version. This is to help ensure that everything runs smoothly when printing invoices.
- Updated the TWAPI employee web creation from a new web account to include middle name.

---

## HrCenter

---

**Fixes:**

- Fixed an "Invalid juris selected for this tax state" error that could come up when an employee (living and working in different states) fills out an application.
- Made fixes to the default skills page.
    - The filter at the top of the Skills page is now functioning properly.
    - Navigating back to a completed but not submitted Skills page will now save the new skills that were newly selected or modified.

---

## WebCenter

---

**Improvements:**

- Optimized the WebCenter orders page to improve loading performance.

**Taxes**

**New:**

- Added Rockland Twp Pennsylvania to zip code 16373.
- Added Bloomfield Twp Pennsylvania to zip code 16404.

**Fixes:**

- Updated New York County taxes to have end dates in 2999 so that these taxes do not give a tax ruleid = 0 error when processing payroll. These County taxes were erroring because the end dates were all in the past. These county taxes rates were and still are 0%.

**JobBoard**

**Fixes:**

- The JobBoard no longer throws an error when a user enters location search data that Google couldn't find a location for.
