

# Supported Platforms & System Requirements

Last Modified on 08/02/2023 2:53 pm CDT

This article contains information on the platforms that are officially supported by TempWorks Software® along with system requirements, broken down by product.

**\*Note\*** Supported platforms and system requirements for all TempWorks products are subject to change.

## Overall

- Beta releases of browsers and/or devices are NOT officially supported.
- Once Microsoft has stopped supporting Internet Explorer, or the browser version can no longer handle our requirements, Internet Explorer will no longer be supported by TempWorks products.
- As of January 14th, 2020, Microsoft is no longer supporting Windows 7. This means that while TempWorks products may continue to work on Windows 7 machines, it is not guaranteed, and it is highly encouraged that you upgrade to Windows 10. This will ensure you have all of the latest security updates. For more information from Microsoft, please see the following [article](#).

## Beyond™

- Chrome, Firefox, Safari, Microsoft Edge – Latest two major versions

## Bridge™

- Chrome, Firefox, Safari, Microsoft Edge – Latest two major versions

## Buzz™

Software:

- iOS - Latest two major versions.
- Android - Latest two major versions.

Hardware:

- Apple - Latest two device generations.
- Android:
  - RAM: 3 or 4GB minimum.
  - CPU: Minimum dual core processor running at 1.2GHz.

## Community Hub

- Chrome, Firefox, Safari, Microsoft Edge – Latest two major versions

## Core™

- System requirements can be found [here](#).
- Remote application requirements can be found [here](#).

## Enterprise™

- System requirements can be found [here](#).
- Remote application requirements can be found [here](#).

**\*Note\*** Windows 11 is not currently supported for running Enterprise due to limitations presented by the operating system including:

- A restricted RDP program, lacking features required by Enterprise.
- The inability to properly setup printers.
- The inability to properly map network drives.

Due to issues outside of TempWorks' control, it is not recommended to utilize Enterprise on a Windows 11 machine.

For additional information and troubleshooting for Enterprise & Windows 11, please see the article titled [Windows 11 Troubleshooting](#).

## HRCenter™

- Chrome, Firefox, Safari, Microsoft Edge – Latest two major versions

## Job Board™

- Chrome, Firefox, Safari, Microsoft Edge – Latest two major versions

## On-Site Time Clock App™

Software:

- iOS - Latest two major versions.
- Android - Latest two major versions.

Hardware:

- Apple - Latest two device generations.
- Android:
  - RAM: 3-4GB minimum.
  - CPU: Minimum dual core processor running at 1.2GHz.

## WebCenter™

- Chrome, Firefox, Safari, Microsoft Edge – Latest two major versions
